

A traditional folded PAPER BOAT.

©2015

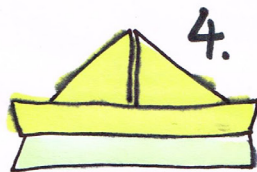

1. Fold an A4 paper in half, making sure that corners line up.

2. Fold in half again to create a crease in the centre. Unfold.

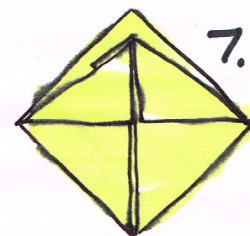

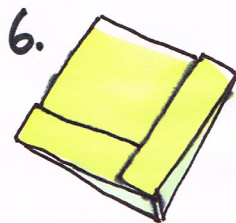

3. With the open side of the paper to the bottom fold upper corners into the creased line, making a point

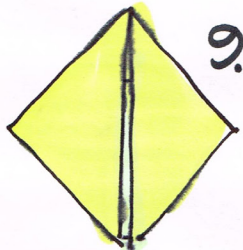

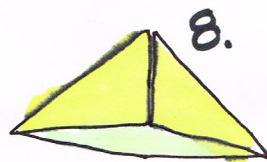

4. Fold the open ends up on both sides by folding up and flipping over.

5. At this stage you have a paper hat.

6. Grab the bottom edges & pull them to each other, folding the paper flat to make a diamond shape

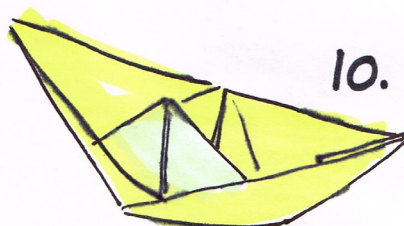

7. Grab the tip of the open side, fold it up toward top corner. Do the same for both sides - you will have a small triangle shape.

8. Open the triangle up from the bottom to make a pyramid shape

9. Grab the bottom corners. Fold them into each other to make a diamond.

10. Then pull out both corners to form your paper boat, and poke fingers into the 'cabin' section to open it up. This little boat can float.... try it!!
